Installation

Installation Instructions

Preparing the Location

- We recommend you install the vent system before you install the hood.
 - Before making cutouts, make sure there is proper clearance within the ceiling or wall for the exhaust vent.
 - Check your ceiling height and the hood height maximum before you select your hood.
1. Disconnect power.
 2. Determine which venting method to use: roof or wall.
 3. Select a flat surface for assembling the range hood. Place a covering over that surface.

⚠ WARNING
TO REDUCE THE RISK OF FIRE, ELECTRIC SHOCK, OR INJURY TO PERSONS, OBSERVE THE FOLLOWING

4. Using 2 or more people, lift the range hood onto covered surface.

Range hood mounting screws installation

1. Determine and mark the centerline on the wall where the canopy hood will be installed. Disconnect power.
2. Select a mounting height between a minimum of 24" (60.9 cm) for an electric cooking surface, a minimum of 30" (76.2 cm) for a gas cooking surface, and a suggested maximum of 36" (91.4 cm) above the range to the bottom of the hood. Mark a reference line on the wall.
3. Tape the template in place, aligning the template centerline and the bottom of the template with the hood bottom line and with the centerline marked on the wall.

A. Centerline
 B. Fastener locations
 C. Mounting height reference (hood bottom line)

4. Mark the fastener locations by pushing a pen or pencil tip through the template into the wall.
- IMPORTANT:** All screws must be installed into wood. If there is no wood to screw into, additional wall framing supports may be required.
5. Remove the template.
 6. Drill $\frac{3}{16}$ " (4.8 mm) pilot holes at all locations where screws are being installed into wood.
 7. Install the 2 - 5 x 45 mm mounting screws. Leave a $\frac{1}{4}$ " (6.4 mm) gap between the wall and the back of the screw head so you can slide the range hood into place.

Vent cover bracket installation

1. Attach the vent cover bracket to the wall flush to the ceiling using 2 - 5 x 45 mm screws.

A. 8 x 40 mm drywall anchors
 B. Centerline on wall
 C. Vent cover support bracket
 D. 5 x 45 mm screws

Complete Preparation

1. Determine and make all necessary cuts in the wall for the vent system. Install the vent system before installing the hood. See the "Venting Requirements" section.
2. Determine the required height for the home power supply cable and drill a $1\frac{1}{2}$ " (3.2 cm) hole at this location.
3. Run the home power supply cable according to the National Electrical Code or CSA Standards and local codes and ordinances. There must be enough wire from the fused disconnect (or circuit breaker) box to make the connection in the hood's electrical terminal box.

NOTE

Do not reconnect power until installation is complete.

4. Use caulk to seal all openings.

Installing the range hood

1. Using 2 or more people, hang the range hood on 2 mounting screws by inserting the mounting screws through the mounting slots on the back of the hood.

A. Mounting screws
 B. Mounting slots
 C. Lower mounting screws

2. Mark the lower mounting hole's location with a pencil.
3. Remove the hood assembly from the wall, and then drill $\frac{3}{16}$ " (4.8 mm) pilot holes at the marked locations.
4. Hang the range hood again on the 2 upper mounting screws.
5. Level the range hood and tighten the upper mounting screws.
6. Install the 2 - 5 x 45 mm lower mounting screws and tighten. Use the optional wall anchors if needed.

Lot 05
Thames
12/4/17

Installation

Connecting the Vent System

This hood is compatible with vented installations only.

1. Install the transition on the top of the hood (if removed for shipping) using 2 - 3.5 x 9.5 mm sheet metal screws.

A. Vent transition
B. 3.5 x 9.5 mm screw

2. Fit the vent system over the exhaust outlet.
3. Measure from the bottom of the air deflector to the bottom of the hood outlet. Cut the ductwork at the measured length.

4. Seal the connection with clamps.
5. Check that the back draft dampers work properly.

Electrical Connection

⚠ WARNING

Electrical Shock Hazard
Disconnect power before servicing.
Replace all parts and panels before operating.
Failure to do so can result in death or electrical shock.

1. Disconnect power.
2. Remove the terminal box cover.

3. Remove the knockout in the terminal box cover and install a UL listed or CSA approved 1/2" strain relief.

A. Terminal box
B. Knockout
C. Terminal box cover

4. Run the home power supply cable through the strain relief into the terminal box.

A. Home power supply cable
B. UL listed or CSA approved strain relief
C. Black wires (Normally L1. Confirm before connecting.)
D. UL listed wire connectors
E. White wires (Normally neutral. Confirm before connecting.)
F. Green (or bare) and yellow-green ground wires

5. Use UL listed wire connectors and connect the black wires (C) together.
6. Use UL listed wire connectors and connect the white wires (E) together.

⚠ WARNING

Electrical Shock Hazard
Electrically ground blower.
Connect the ground wire to the green and yellow ground wire in the terminal box. Failure to do so can result in death or electrical shock.

7. Connect the green (or bare) ground wire from the home power supply to the yellow-green ground wire (F) in the terminal box using UL listed wire connectors.
8. Tighten the strain relief screw.
9. Install the terminal box cover.
10. Reconnect the power.

Lot 65
Thames
12/4/17

Installation

Installing the duct covers

When using both upper and lower vent covers, push the lower cover down onto hood and lift the upper cover to the ceiling and install with two mounting screws.

NOTE

The upper vent cover may be reversed to hide the slots.

A. Upper vent cover
B. Lower vent cover
C. 4.2 x 8 mm screws
D. Bracket

Secure the bottom of the duct with 2 - 4.2 x 8 mm screws.

Completing the Installation

1. Install the metal baffle filters. See the "Range Hood Care" section.
2. Check the operation of the range hood blower and light. See the "Range Hood Use" section.

NOTE

To get the most efficient use from your new range hood, read the "Range Hood Use" section.

Range Hood Use

Range Hood Description

The range hood is designed to remove smoke, cooking vapors, and odors from the cooktop area. For best results, start the hood before cooking and allow it to operate several minutes after cooking is complete to clear all smoke and odors from the kitchen. The hood controls are located on the front side.

A. Baffle filter
B. Baffle filter handle
C. Blower and light controls
D. LED lamps

GETTING READY TO INSTALL THE REFRIGERATOR

Congratulations on your purchase of this Samsung French Door Refrigerator.

We hope you enjoy the state-of-art features and efficiencies that this new appliance offers.

Selecting the best location for the refrigerator

Choose :

- A location with easy access to a water supply.
- A location without direct exposure to sunlight.
- A location with a level floor.
- A location with enough space for the refrigerator doors to open easily.
- A location that allows sufficient space to the right, left, back and top for air circulation.
- A location that allows you to move the refrigerator easily if it needs maintenance or service.
- Do not install the refrigerator in locations where the temperature is over 110 °F (43 °C) or below 50 °F (10 °C).
- Do not locate the refrigerator where it may become wet.

If the refrigerator does not have enough space, it can cause the bad influence to refrigeration efficiency and power consumption.

If your refrigerator has an ice maker, allow extra space at the back for the water line connections. When you install the refrigerator next to a fixed wall, you need a minimum clearance of 3 3/4" (95 mm) between the refrigerator and wall to allow the door to swing open.

Important : Make sure that you can easily move your refrigerator to its final location by measuring doorways (both width and height), thresholds, ceilings, stairways, etc.
The following chart details the exact height and depth of this Samsung French Door Refrigerator.

Depth "A"	28 5/8" (726 mm)
Width "B"	35 3/4" (908 mm)
Height "C"	68 7/8" (1749 mm)
Overall Height "D"	70" (1777 mm)
Depth "E"	31" (788 mm)

Each measurement based on the design dimension, so it may differ depending on the measuring method.

Minimum dimensions

If overhead cabinets are provided, a range hood should also be provided that projects horizontally a minimum of 5 in (12.7 cm) beyond the front of the cabinets. This will dissipate any heat buildup in the overhead cabinets to prevent death, personal injury, and/or fire hazard. The ventilating hood must be constructed of sheet metal not less than 0.0122" thick. Install above the cooktop with a clearance of not less than 1/4" between the hood and the underside of the combustible material or metal cabinet. The hood must be at least as wide as the appliance and centered over the appliance. Clearance between the cooking surface and the ventilation hood surface must never be less than 24 inches.

Exception 1 : Installation of a listed microwave oven or cooking appliance over the cooktop shall conform to the installations packed with that appliance.

- 30-in (101.6-cm) minimum clearance between the top of the cooking surface and the bottom of an unprotected wood or metal cabinet; or if no 30-in (101.6-cm) minimum clearance, 24-in (61-cm) minimum when the bottom of the wood or metal cabinet is protected by not less than 0.25-in (0.64-cm) flame-retardant millboard covered with not less than no. 28 MSG sheet steel, 0.015-in (0.038-cm) stainless steel, 0.024-in (0.061-cm) aluminum, or 0.020-in (0.051-cm) copper.
- 18-in (45.7-cm) minimum between the countertop and the adjacent cabinet bottom.

Exception 2 : For island installation, maintain 2-1/2" minimum from cutout to back edge of countertop and 4" minimum from cutout to side edges of countertop.

Installation guide

A: Cabinet opening 30" (76.2 cm)

IMPORTANT: If your cabinet have height over 36-4/5", this range cannot be installed without supporting unit like hard block.

TO AVOID BREAKAGE

CAUTION Do NOT lift or handle the unit by the cooktop frame.

1. The counter top around the cut-out should be flat and leveled (see hatched area on Fig. 1).
2. Before installing the unit, measure the heights of the two cabinet sides (C1-C4), front and back (See Fig. 1) from the floor to the top of the counter.
3. Level the range using the four leveling legs so that the height from the floor to the underside of the cooktop frame is greater than the tallest cabinet measurement **by at least 1/16"**.
4. Slide the unit into the cabinet (**DO NOT PUSH THE UNIT HARD**). Make sure the center of the unit aligns with the center of the cabinet cut-out.

Recommended locations for gas piping and electrical outlets

(For models NX58H9950W*, NX58H9500W*, NX58K9500W*)

CAUTION You must use the rear filler kit to install the range in a freestanding cutout cabinet. For more information, see "Optional rear filler kit" as shown below.

Optional rear filler kit

WARNING Used to fill gap between the range back and wall. Adds a filler strip to the rear of the range. This kit can only be used when the opening in the countertop is 25" deep.

☒ If the countertop depth is greater than 25", there will be a gap between the filler kit and the back wall.
