**Cia Brushed Gold One-Handle
High Arc Pulldown Kitchen
Faucet**

With its elegantly lengthened, C-shaped spout form, Cia stands out from the linear and horizontal designs featured in most modern faucets. The spout's curves and the handle's defined edges combine with elegant details for a look that feels classic yet fresh. Depending on the finish, this collection beautifully reaches across décor styles from luxe modern to soft modern to industrial chic. Cia pulldown faucets offer new finish combinations with optional mixed finish accents for an elevated aesthetic in the kitchen.

KBSD706MPS - B/I FRIDGE

- The water shutoff should be located in the base cabinet on either side of the refrigerator or some other easily accessible area. If the water shutoff valve is not in the cabinets, the plumbing for the water line can come through the floor. See "Water Supply Requirements" for more information.

36	35½" to 35¾" (90.2 cm to 90.8 cm)	4" (10.2 cm)

NOTE: Flooring under appliance must be at same level as the room. Face of cabinetry must be plumbed.

Installation Type	Depth C (as shown above)
Standard Flush (new installation)	25" (63.5 cm) minimum
Retrofit Installations	24" (60.9 cm) minimum

NOTE: On retrofit installations, door panels will not be flush with adjacent cabinets.

Electrical Requirements

⚠ WARNING

Electrical Shock Hazard

Plug into a grounded 3 prong outlet.

Do not remove ground prong.

Do not use an adapter.

Do not use an extension cord.

Failure to follow these instructions can result in death, fire, or electrical shock.

Before you move your refrigerator into its final location, it is important to make sure you have the proper electrical connection.

If the supply cord is damaged, it must be replaced by the manufacturer or its service agent or a similarly qualified person. Do not use a cord that shows cracks or abrasion damage along its length or at either the plug or connector end.

Recommended Grounding Method

A 115 V, 60 Hz AC only 15 A or 20 A fused, grounded electrical supply is required. It is recommended that a separate circuit serving only your refrigerator and approved accessories be provided. Use an outlet that cannot be turned off by a switch. Do not use an extension cord.

IMPORTANT: If this product is connected to a GFCI (Ground Fault Circuit Interrupter) protected outlet, nuisance tripping of the power supply may occur, resulting in loss of cooling. Food quality and flavor may be affected. If nuisance tripping has occurred, and if the condition of the food appears poor, dispose of the food.

NOTE: Before performing any type of installation or cleaning, remove the top grille and turn the master power switch to OFF or disconnect power at the circuit breaker box. When you are finished, turn ON the master power switch or reconnect power at the circuit breaker box. Then reset the control to the desired setting.

Water Supply Requirements

IMPORTANT:

- All installations must meet local plumbing code requirements.
- Connect to potable water supply only.
- There is not enough clearance to achieve a flush installation if a water shutoff valve is located in the wall behind the refrigerator.
- The water shutoff should be located in the base cabinet on either side of the refrigerator or some other easily accessible area. The right-hand side is recommended. The access hole through the cabinet must be within 1/2" (1.3 cm) of the rear

KBSD706MPS - B/I FRIDGE

NOTE: If the water shutoff valve is in the back wall behind the refrigerator, it must be at an angle so that the tube is not kinked when the refrigerator is pushed into its final location.

- If the water shutoff valve is not in the cabinets, the plumbing for the water line can come through the floor. A 1/2" (12.7 mm) hole for plumbing should be drilled at least 6" (15.2 cm) from the right-hand or left-hand side cabinet or panel. On the floor, the hole should be no more than 1" (2.54 cm) away from the back wall. See "Connect the Water Supply."
- If additional tubing is needed, use copper tubing and check for leaks. Install the copper tubing only in areas where the household temperatures will remain above freezing.
- If additional tubing is needed, use copper tubing and check for leaks. Install the copper tubing only in areas where the household temperatures will remain above freezing.
- Do not use a piercing-type or 3/16" (4.76 mm) saddle valve which reduces water flow and also clogs more easily.
NOTE: Your refrigerator dealer has a kit available with a 1/4" (6.35 mm) saddle-type shutoff valve, a union, and copper tubing. Before purchasing, make sure a saddle-type valve complies with your local plumbing codes.

Water Pressure

A cold water supply with water pressure between 30 psi and 120 psi (207 kPa and 827 kPa) is required to operate the water dispenser and ice maker. If you have questions about your water pressure, call a licensed, qualified plumber.

NOTE: If the water pressure is less than what is required, the flow of water from the water dispenser could decrease or ice cubes could be hollow or irregular shaped. If you have questions about your water pressure, call a licensed, qualified plumber.

Reverse Osmosis Water Supply

IMPORTANT: The pressure of the water supply coming out of a reverse osmosis system going to the water inlet valve of the refrigerator needs to be between 30 psi and 120 psi (207 kPa and 827 kPa).

If a reverse osmosis water filtration system is connected to your cold water supply, the water pressure to the reverse osmosis system needs to be a minimum of 40 psi to 60 psi (276 kPa to 414 kPa).

If the water pressure to the reverse osmosis system is less than 40 psi to 60 psi (276 kPa to 414 kPa):

- Check to see whether the sediment filter in the reverse osmosis system is blocked. Replace the filter if necessary.
- Allow the storage tank on the reverse osmosis system to refill after heavy usage.
- If your refrigerator has a water filter, it may further reduce the water pressure when used in conjunction with a reverse osmosis system. Remove the water filter cartridge.

If you have questions about your water pressure, call a licensed, qualified plumber.

Tipping Radius

Be sure there is adequate ceiling height to stand the refrigerator upright when it is moved into place.

- Be sure there is adequate ceiling height to stand the refrigerator upright when it is moved into place.
- If needed, the tipping radius can be reduced. See "Reduce Tipping Radius."

Side Tipping Radius

The side tipping radius varies depending upon the width of the model. Use the chart provided to determine the side tipping radius.

NOTE: Tip on side only.

* Electrical Requirements

⚠ WARNING

Electrical Shock Hazard

Plug into a grounded 3 prong outlet.

Do not remove ground prong.

Do not use an adapter.

Do not use an extension cord.

Failure to follow these instructions can result in death, fire, or electrical shock.

IMPORTANT: The range must be electrically grounded in accordance with local codes and ordinances or, in the absence of local codes, with the National Electrical Code, ANSI/NFPA 70 or Canadian Electrical Code, CSA C22.1.

If codes permit and a separate ground wire is used, it is recommended that a qualified electrical installer determine that the ground path is adequate.

A copy of the above code standards can be obtained from:

National Fire Protection Association

1 Batterymarch Park

Quincy, MA 02169-7471

CSA International

8501 East Pleasant Valley Road

Cleveland, Ohio 44131-5575

- A 120 V, 60 Hz, AC only, 15 A, fused electrical circuit is required. A time-delay fuse or circuit breaker is also recommended. It is recommended that a separate circuit serving only this range be provided.
- Electronic ignition systems operate within wide voltage limits, but proper grounding and polarity are necessary. Check that the outlet provides 120 V power and is correctly grounded.
- The wiring diagram is located behind the kick plate in a clear plastic bag.
- When a 4-wire, single-phase 240 V, 60 Hz, AC only electrical supply is available, a 40 A minimum circuit protection is required on 30" (76.2 cm) and 36" (91.4 cm) ranges and a 50 A minimum circuit protection is required on 48" (121.9 cm) ranges, fused on both sides of the line.

* Gas Supply Requirements

⚠ WARNING

Explosion Hazard

Use a new CSA International approved gas supply line.

Install a shut-off valve.

Securely tighten all gas connections.

If connected to propane, have a qualified person make sure gas pressure does not exceed 14" (36 cm) water column.

Examples of a qualified person include:

licensed heating personnel,
authorized gas company personnel, and
authorized service personnel.

Failure to do so can result in death, explosion, or fire.

Observe all governing codes and ordinances.

IMPORTANT: This installation must conform with all local codes and ordinances. In the absence of local codes, installation must conform with American National Standard, National Fuel Gas Code ANSI Z223.1/NFPA 54 — latest edition — or in Canada, the Natural Gas and Propane Installation Code, CSA B149.1 — latest edition.

IMPORTANT: Range must be connected to a regulated gas supply.

IMPORTANT: Leak testing of the range must be conducted according to the manufacturer's instructions.
