Framing

This appliance is designed to be recessed into combustible framing with non-combustible material pre-installed on top and side. Drywall or combustible materials (minimum 1/2 inch thick) are designed to contact the non-combustible material/appliance as called out in Section 10 Finishing.

This appliance has been thoroughly tested to minimize drywall cracking and/or the protrusion of screws "screw pops" when framed as shown below.

Framing should be done in a manner similar to framing a window or door. Double-2x4/2x6 as a header for horizontal strength and utilizing Jack or Trimmer stud fastened to the King studs for vertical strength.

If elevating the appliance, the base of the unit should also be constructed in a similar manner to prevent settling.

Note: Refer to Section 10 for important information related to facing, drywall specifications and decorative front information.
